

The logo for DEVPOST, featuring the word "DEVPOST" in white, bold, sans-serif capital letters. The text is centered within a dark blue, horizontally-oriented hexagonal shape. This hexagon is framed by a light blue border that forms a larger, slightly irregular hexagonal shape, with the corners pointing outwards.

Building agents for real-world challenges

AI that doesn't just
provide answers—it
helps you take action.

[Descend](#)

- [Updates](#)
- [Discussions](#)
- [FAQ](#)

✂ Phase 1: Core Frameworks & Environment

The first step is choosing your build environment. Whether you want a managed platform or a local setup, start here.

- Managed Setup: [Gemini Enterprise Agent Platform API Setup](#) – The essential mission control for all Google Cloud agent projects.
- The Low-Code Path: [Agent Builder Guide](#) – Best for rapid development using managed orchestration, grounding, and enterprise data stores.

- Developer SDK: [Gemini Enterprise Agent Platform SDK for Python](#) – The client library required for writing custom agent logic and handling tool calls.
- [Agent Starter Pack](#)
- You can get access to Google Cloud in two ways:
 1. Sign up for a no-cost trial at cloud.google.com/free
 2. Use an existing Google Cloud account and request \$100 in credits: <https://forms.gle/xfv9vQzfRfNCCVbG7> (approved within 1–5 business days, *while supplies last*)

May 21st Update: Due to high demand, all remaining additional credits are now limited and will be distributed on a first-come, first-served basis.

Phase 2: Action Mechanisms & Data Connectivity

Agents need to "do" things and "know" things. Use these resources to give your agent agency over data and tools.

Core Action Mechanisms (Tool Use)

- Agent Builder Extensions: [Building & Managing Extensions](#) – Use pre-built Google extensions or connect your managed agent to any external API.

Knowledge & Grounding

- Agent Builder Data Stores: [Agent Search and Agent Conversation Overview](#) – Use this unified platform to index your PDFs, websites, or BigQuery tables and give your managed agent a "source of truth."

Phase 3: Partner Integration & Infrastructure

Click each link below for Partner-specific information and resources:

- [Arize](#)
- [Elastic](#)
- [Fivetran](#)
- [GitLab](#)
- [MongoDB](#)
- [Dynatrace](#)

Phase 4: Reasoning, State, & Logic Hosting

Complex missions require memory and a place for your code to live.

- Managed Orchestration: [Agent Runtime](#) – A runtime for deploying Python-based agents (LangChain/LlamaIndex) built with Agent Builder or the SDK.
- State & Secrets: [Secret Manager](#) – Securely store and retrieve API keys for your partner integrations.

Phase 5: Deployment & Safety

- Agent Deployment: Agent Builder Deployment – Learn how to make your managed agent accessible via a web interface or API.
- Custom Backend Hosting: [Cloud Run Quickstart](#) – The go-to for hosting your own agent backends or custom-built tool servers.
- Safety & Guardrails: [Gemini Enterprise Agent Platform Safety Settings](#) – Configure filters to ensure your agent remains helpful and follows your defined constraints.

Upcoming events!

Secure AI Agent Deployment with GitLab and Gemini

A quick demo showing secure and fast AI Agent deployment using the latest agent orchestration and services from GitLab and Google Cloud.

May 26 — 1:00 PM EDT / 10:00 AM PDT — Discord Build Session

[Watch the recording →](#)

Power Your AI Agent with Data — Q&A with Fivetran & Google Cloud

A live Q&A session with Fivetran and Google Cloud on powering your AI agent with reliable, connected data pipelines.

May 27 — 12:00 PM EDT / 9:00 AM PDT — Webinar

[Watch the recording →](#)

Getting from Zero to a Traced Agent in 5 minutes with Phoenix MCP

Learn how to work directly with Phoenix projects, traces, sessions, prompts, datasets, experiments, and annotations.

May 28 — 1:00 PM EDT / 10:00 AM PDT — Build Session
